

Nedap Now
Herd Insights

Your guide to smarter dairy management across multiple sites.

How to benchmark, monitor,
and optimise all your dairy locations
from one powerful dashboard.

Improving life on the farm

 **nedap**

Why managing multiple sites is easier than you think.

Need to be in two places at once?

Dairy farmers wear many hats – from herd managers to nutritionists, mechanics, and business strategists. Running a single farm is already complex, but for those managing multiple sites, keeping control and consistency can become a daily challenge.

Balancing staff schedules, monitoring herd health, coordinating machinery, and ensuring each site meets production goals requires constant attention. Without streamlined tools, it's easy to feel stretched thin, missing vital details or delaying decisions. The need to stay connected and informed across all sites often means working longer hours and juggling priorities.

Sound familiar?

“I can't be everywhere at once, but it feels like I need to be.”

“I'm always chasing my tail. By the time I hear about a problem, it's already too late.”

“There's got to be a better way to keep all our comms and data in one place.”

Managing multiple sites doesn't have to mean feeling overwhelmed or constantly playing catch-up. With the right approach and tools, you can stay connected, in control, and make confident decisions - no matter where you are.

The features unpacked

Nedap Now Multi-Site Widget

Nedap's Multi-Site feature lets you seamlessly monitor and manage all your farms in one place through Nedap Now—the cloud-based platform for all Nedap solutions. This smart technology saves time, improves cow health, and drives smarter decisions by centralising your operations on a single dashboard you can access anytime, anywhere, on any device, switching seamlessly between sites. Centralising isn't just convenient; it's a game-changer for performance across your entire dairy business.

User access can be customised by role: owners or overall managers can view every site, while location or herd managers can be limited to their own data.

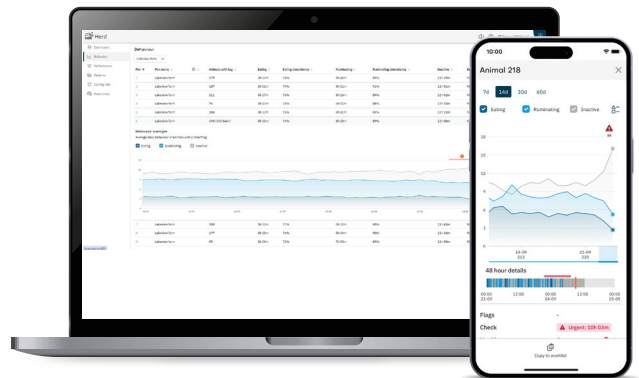

The platform integrates smoothly with herd management systems and third-party tech like milking and monitoring tools. And with the Multi-Site widget, you can combine data from all sites for deeper analysis and insights – even when cows move between sites.

Benchmark performance across farms

Compare breeding success, fertility rates, health KPIs, eating patterns, heat stress, activity, rumination, and transition cow management across all your locations. Owners and managers can benchmark cow data to identify best practices.

Why it matters: Replicate successes and eliminate bottlenecks across your entire operation.

Full visibility across all sites

With the Multi-Site widget, monitor real-time data for every location on one platform.

Why it matters:

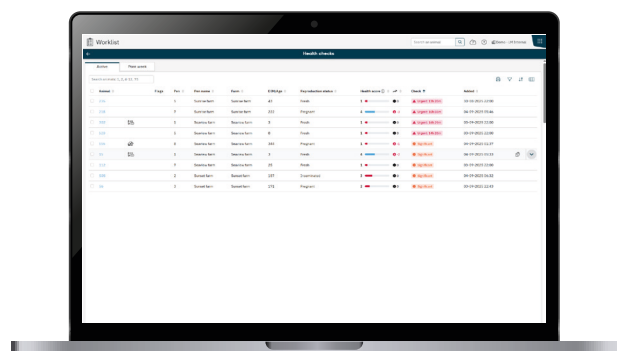

Centralised oversight made simple. Everything you need in one easy-to-use interface - no hassle, no jumping between systems.

Smarter people management

Get a full overview of tasks and workflows across teams and sites. Delegate, monitor, and customise worklists by role and location to standardise procedures.

Why it matters: Optimise scarce labour, identify training needs, and track team performance, all from one remote tool.

Seamless cow data

Moving cows between sites? No problem. All historical data, health records, and current alerts follow automatically - no gaps, no recalculations, no missing information.

Why it matters: You keep the full picture of each cow's history, so monitoring continues uninterrupted. Heat and health alerts stay active, baselines remain intact, and there's no need to start from scratch. That means faster decisions, fewer errors, and far less admin.

Save time and cut costs

Centralise all site data in one place to avoid juggling multiple apps. Streamline reporting and data collection and catch health issues early, even remotely.

Why it matters: Faster decisions improve herd health, reduce costs, and deliver consistent results across farms.

“We’re able to have all these animals on all these sites ... we can move the animals between the sites and we don’t lose our baselines.”

JJ Pagel | multi-site dairy farmer

Combine and expand with other Nedap solutions

Discover the possibilities of Nedap's complete and flexible cow monitoring platform. Combine SmartTags with SmartSort to easily sort cows for treatment. Expand with SmartFlow and SmartSight to get a comprehensive view of each cow.

Globally renowned technology, backed by trusted local partners

Our cow monitoring technology powers leading dairy innovation specialists who amplify its value and understand your region, herd goals, and operations. Discover more about Nedap Now features: [Nedap-livestockmanagement.co.nz](https://nedap-livestockmanagement.co.nz)
